

# AMP-40 sUAS Micro-Munitions

## Simple - Compact - Adaptive

### Novel Technology

AMP-40 integrates new patent-pending fragmentation technology with a high-yield, light-weight design enabling unseen lethality for both small and large sUAS

### Compact Design

Composing of very few parts, AMP-40 is extremely simple to manufacture, produce, and scale to match modern sUAS demands

### Characteristics

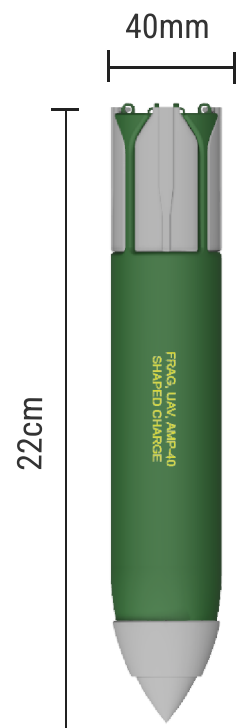

- 500g (1.1lb) weight
- 4x22cm (1.6x8.6in) size
- Impact detonator
- 2000+fragments
- Remote Release

### Light Weight

Weighing 1lb, AMP-40, and its variants, enable users to deliver lethal capabilities against a broad range of possible targets

### Multiple Variants

Using multiple variants to include High-Explosive, Thermobaric, Anti-Material, and Training, AMP-40 is mission tailorable to different user needs

AMP-40: The pioneering 40mm munitions uniquely tailored for Small Unmanned Aircraft Systems (sUAS). The AMP-40 family offers a diverse range of options, including high-explosive, thermobaric, shaped-charge, and training variants, and uses a universal mount with a remote release to operate on any sUAS platform. Using innovative technology such as multi-fragmentation methods and featuring an easy to-manufacturable design, AMP-40 munitions allow for simple, low-cost armament of sUAS, enabling enhanced lethality, improved operational safety, and unparalleled effectiveness against a wide array of modern systems.
